## Microsoft Teams

Looking ahead, Teams emphasized sustainability metrics, ubiquitous device integration, and advanced collaboration interfaces that blend cloud services with endpoint intelligence.

2029 — Moderate uptake by sustainability-conscious enterprises. Accuracy of carbon estimates debated. Helped position Microsoft as ESG-friendly vendor. Launched meeting carbon-impact dashboards.

2030 — Firmware dependencies on legacy devices. Rolled out device-level seamless handoff across endpoints.

2031 — Drove higher enterprise Windows adoption. Unified Teams with Windows productivity layer. Compatibility issues during phased rollout.

2032 — High GPU compute demand limited access. Piloted holographic and spatial meetings. Enthusiastic adoption among pilot groups.
